The Nfina Technologies 724i20 is a high-value and high-density storage solution ideal for file server and backup storage applications.

Nfina Technologies' 724i20 is our most costeffective, highest density offering for primary storage. Designed for high performance use in a wide range of server applications, the 724i20 is an outstanding general-purpose platform for file server and backup applications in data centers that demand high density and high reliability. The unit is provided with software options pre-configured as an iSCSI or NFS volume. It's easy to use GUI provisions up to 144TB onboard and can easily be extended to 1PB by adding 600 Series JBOD storage expansion units.

Nfina's server solutions are ideal for any data center or enterprise that requires efficient, high speed, and highly reliable performance for big data applications. Data centers for enterprise, military, and municipal government will benefit from Nfina's outstanding value.

Nfina products deliver exceptional functionality by creating products that are easily customized to fit specific applications. Designed and built for virtualized computing environments, our products provide high-density, maximum yield solutions for our customers. Multiple options for high performance computing, including I/O, RAID, storage, and memory options make our products a custom fit for many applications.

All Nfina Technologies' servers are backed by a five-year limited warranty and include 24x7 tech support with remote diagnostics. Next day and four hour onsite response options are available.
