Accelerate your information processing by moving your storage devices to Nfina's Hyper-Edge.

Nfina's Hyper-Edge™ 2108R reduces network strain by making it possible to send only the most valuable and relevant data to the edge servers thus making data processing timelier. Nfina's Hyper-Edge products put information processing (Data Entry, Storage, Compute, Point of Sale, or SMB's) closer to your edge applications. With Nfina powering your edge, you can improve security and compliance, achieve faster response times, create redundancy, reduce latency, lower cost, and complement your existing cloud computing infrastructure.

To ensure data security and retention, four software, backup and disaster recovery options are offered with our Hyper-Edge products: **Nfina EdgeStore**, software included with smaller capacity storage, provides integration for local and offsite data backup and disaster recovery. Unlike many of our competitors, you can choose to store your offsite storage where you like; the cloud, colo, or with Nfina Cloud. **Open-E JovianDSS**, software included with larger capacity storage, helps create and manage HA clusters on your Hyper-Edge device and provides no single point of failure. Features include tiered RAM, unlimited snapshots with instant restore, compression and deduplication, and on and offsite data protection. **Nfina Cloud**, a cloud-based subscription service, allows you to safely back up your Edge and Hyperconverged products. Your data is encrypted before it crosses the wire and remains encrypted during transmission and while stored. Only your organization holds the encryption key. **Nfina Restore** allows you to quickly recover data in the event of a Server or Storage system catastrophic failure. Easily restore individual files, folders, VMs, or even an entire SAN from your cloud storage.
